

Editing/Formatting

My whole editor window disappeared. (Layout Issues)

Sometimes the settings that store the "layout" (position on screen, size of window panes, splitters, etc.) get set beyond where you can "grab" the edges/splitters to resize. This can result in the editor or ClipList panes becoming invisible.

This can be corrected by "resetting" the layout settings. To do so, go to Tools | Options | Advanced. There is a button titled "Layout/Font" under the "reset" section. Click that, re-start ClipMate, and all should be well.
