Misc

Under Windows 10, when opening the Import from XML, I do not have a dialog that allows me to 'Browse' and select a path. That control is non-existent in the dialog box.Any ideas?

There is a screen scaling problem with that dialog, and the buttons are "pushed" off the edge of the form.

This will need to be fixed. But in the meantime, here's the work-around:

Open the dialog, then press TAB 8 times, then ENTER.

That will navigate to the "browse..." button and execute it.
